

HEARING LOSS ~ VIDEOs

Sound Advice for Farming (7 min.)

This video was produced by the Southeast Center for Agricultural Health and Injury Prevention specifically for AgDARE. The video takes the viewer to a farm and plays various farm sounds at different decibel levels. These hearing loss simulations are based on actual audiograms of farmers with hearing loss. Included in the video is a segment that demonstrates the sounds of the human voice when heard through these different levels of loss.

Videos are only \$10 each (the cost of video production and shipping and handling). Please contact Dr. Deborah Reed at the University of Kentucky, College of Nursing, dbreed01@uky.edu , 859-257-9636.
